

# Jeroen Peeters

## Frontend Developer

[contact@jeroenpeeters.be](mailto:contact@jeroenpeeters.be)  
<https://jeroenpeeters.be>

## Education

**B.A.Sc. Information Science**  
Hogeschool PXL | 2013 - 2017

## Certificates

**Scrum Master Accreditation**  
International Scrum Insitute | 2017

## Hobbies

**Gaming** - specifically games of the Pokémon franchise - has had a lasting impact on me and has been the main reason I'm in software development now.

A thorough enjoyer of **mechanical keyboards**. My main boards right now are a Keychron Q9 Plus and a Wooting 60HE that have been heavily customized to my liking.

If time allows it, I occasionally try out **recipe testing, music production** and **3D printing**.

## Interests

Outside of office hours I'm still actively engaged in software development, currently exploring **local-first** architecture using a personal habit tracker I made as a playground.

For a while now, I have been a staunch supporter of the **PWA** movement. When given the opportunity I would love to explore it further and fully!

At different workplaces, I've built up experience with and remain incredibly interested in **Agile Processes, UI/UX** and **DX**.

## Skills

**Experienced:** React, Typescript, React Native, CSS/Tailwind/Styled Components, Zustand/Redux, Node, Firebase, Git

**Exploring:** Style Dictionary, DTCG Design Tokens, Postgres, InstantDB, Cloudflare Workers, Cloudflare D1, Tinybase

**Been a while:** Go, MobX, Electron

## Professional Experience

**Twipe** (Frontend Developer) | May 2021 - Present

I joined Twipe's React Native team in 2021. My goal from the start was to help modernize their approach to both their web and mobile products, potentially even consolidating them. Being a passionate React and Typescript advocate, this is where I grew to love React Native as well.

At Twipe I've had the pleasure of spearheading multiple key features, but the ones I'm most proud of are the suite of native audio playback (podcasts, tts, ...) and Dark Mode (which was a massive undertaking for an app hardcoded to Light Mode!) which came coupled with the introduction of a shareable Design System.

**UnifiedPost Group** (Frontend Developer) | March 2019 - April 2021

I worked at UP as a Frontend developer (solely React + Typescript), on a collaborative tool to make documents for print and invoicing (using Firebase for realtime collaboration). I specifically spent quite some time on back office tools enriching the product.

**De Cronos Groep** (Frontend Developer) | August 2017 - March 2021

Following my graduation I worked as a Frontend Consultant for De Cronos Groep, where I contributed on React and React Native projects for Federal instances (National rail, Flemish tv broadcasting, BPost) and large corporations (Colruyt Group).

**wearefront** (Founder) | January 2016 - August 2017

wearefront was a project I started while in College, that flowed out of being actively involved in the Belgian metal scene, contributing in production but also management and distribution.

This led me through the incubator programs of my College and KBC to focus on building tools for independent artists. This lasted until my graduation in 2017.
